Ch-8

Carts and Wheels

❖ Key points to remember:

- Introduction
- Find the missing radius or diameter in the given table
- Fill in the blanks.
- Look at the figure and answer the following questions.
- Using rounder draw a circle of the given radius.

- **Introduction** (<https://www.youtube.com/watch?v=6TDsT0enyxs>)

- **Circle:** A circle is a round shaped figure that has no corners or edges. A circle is a closed curve.
- The fixed point is called the **centre of the circle**.

- **Circumference:** The total length of the boundary of the circle is called circumference of the circle.

- **Chord:** A chord is a line segment joining any two points on the circle.

Step: If we fold any part of the circle now. The part formed is called the chord of the circle.

- **Diameter:** The longest chord which pass through the centre is called diameter.

Step: Fold the cut circle into half. We will get semicircle.

Now unfold the semicircle and see the part formed is called the diameter of circle. All diameter of the given circle is equal in length.

- **Radius:** The line segment joining the centre of the circle to any point on the circle is called the radius of the circle.

- Radii of a circle are of equal lengths.
- Radii is plural of radius. (example)

- Each diameter is formed of two radii.
- **Arc** – Any part of the circumference of the circle is called arc.

Formula:

- **Diameter** = 2 x radius

- **Radius** = Diameter/2

Example 1: Radius = 6 cm. Find diameter

$$\begin{aligned} \text{Diameter} &= 2 \times 6 \text{ cm} \\ &= 12 \text{ cm} \end{aligned}$$

Example 2: Diameter = 18 cm. Find radius

$$\begin{aligned} \text{Radius} &= 18/2 \text{ (division)} \\ &= 9 \text{ cm} \end{aligned}$$

- Find the missing radius or diameter in the given table.

Sr. no	Radius	Diameter
1	4 cm	<u>2 x 4 cm = 8 cm</u>
2	<u>$\frac{12 \text{ cm}}{2} = 6 \text{ cm}$</u>	12 cm
3	3 cm	<u>2 x 3 cm = 6 cm</u>
4	<u>$\frac{16 \text{ cm}}{2} = 8 \text{ cm}$</u>	16 cm
5	5 cm	<u>2 x 5 cm = 10 cm</u>
6	<u>$\frac{4 \text{ cm}}{2} = 2 \text{ cm}$</u>	4 cm

- **Fill in the blanks.**

- Diameter is the longest chord of the circle.
- A circle is a simple closed curve shape.
- Diameter divides the circle into two equal halves.
- The length of the boundary of a circle is called circumference of a circle.
- Line segment joining any two points on the edge of the circle is called chord.

- **Using rounder draw a circle of the given radius.** (<https://www.youtube.com/watch?v=BfR-mphcTvE>)

a) 3cm

b) 4 cm

c) 2.5 cm

- Look at the figure and answer the following questions.

- 1) Center of the circle – **O**
- 2) Chord of the circle – **MN, AB**
- 3) Radii of the circle – **OB, OP, OA**
- 4) Diameter of the circle - **AB**

Activity

- Make any design using only rounder or compass. For eg

CH- 9

Halves and Quarter

❖ **Key points to remember:**

- Introduction of fraction
- Fill in the blanks.
- Equivalent Fractions

Ways to find whether fractions are equivalent or not: -

Ways to build equivalent fractions:-

- Addition of Like Fractions
- Subtraction of Like Fractions
- Word problem.
- Activity.

- **Introduction of fraction**

Fraction: A fraction is a small part or proportion of something.

Whole

It is 1 whole

Half

Here we have divided a whole into two equal parts, each is part is called half or $1/2$

One-third

Here we have divided a whole into three equal parts; each part is called One-third or $1/3$.

One-fourth or Quarter

Here we have divided a whole into four equal parts; each part is called One-fourth or $\frac{1}{4}$.

How to read and write fractions?

Here, a big rectangle is divided into 5 equal parts. Out of 5 parts only 2 parts is shaded in green.

So, fraction for shaded part is $\frac{2}{5}$

It can be read as 2 by 5 or 2 upon 5

$\frac{2}{5}$ → **Numerator** (represents parts we are taking about, out of total)
 $\frac{2}{5}$ → **Denominator** (represents total parts into which whole is divided)

• Fill in the blanks.

- 1) A fraction is a small part of something.
- 2) Number written above the line in a fraction is called numerator.
- 3) Number written below the line in a fraction is called denominator.
- 4) In $\frac{2}{5}$, 2 is the numerator and 5 is the denominator.
- 5) In $\frac{3}{8}$, 3 is the numerator and 8 is the denominator.
- 6) In $\frac{6}{9}$, _____ is the numerator and _____ is the denominator.
- 7) In $\frac{7}{8}$, _____ is the numerator and _____ is the denominator.
- 8) In $\frac{8}{9}$, _____ is the numerator and _____ is the denominator.

- **Equivalent Fractions**

Equivalent fractions are the fraction that look different but have same value.

A. Ways to find whether fractions are equivalent or not: -

Example:

$$\frac{5}{15} \begin{array}{c} \swarrow \quad \searrow \\ \quad \quad \quad \\ \nwarrow \quad \nearrow \end{array} \frac{1}{3}$$

$$5 \times 3 = 15$$

$$1 \times 15 = 15$$

The two products are equal. So, 5/15 and 1/3 are equivalent fraction.

1) $\frac{3}{5}$ and $\frac{9}{15}$

Answer:

$$3 \times 15 = 45$$

$$5 \times 9 = 45$$

Yes it is an equivalent fraction.

2) $\frac{1}{2}$ and $\frac{4}{5}$

Answer:

$$1 \times 5 = 5$$

$$2 \times 4 = 8$$

No, it is not an equivalent fraction.

3) $\frac{5}{6}$ and $\frac{20}{24}$

Answer:

$$5 \times 24 = 120$$

$$20 \times 6 = 120$$

Yes it is an equivalent fraction.

4) $\frac{6}{9}$ and $\frac{7}{9}$

Answer:

$$6 \times 9 = 45$$

$$7 \times 9 = 63$$

No, it is not an equivalent fraction.

5) $\frac{2}{3}$ and $\frac{14}{21}$

Answer:

$$21 \times 2 = 42$$

$$14 \times 3 = 42$$

Yes it is an equivalent fraction.

B. Ways to build equivalent fractions: -

Multiply numerator and denominator of the given fraction by common number but not by zero.

Example: $\frac{4}{5}$

$$\frac{4 \times 2}{5 \times 2} = \frac{8}{10} ; \quad \frac{4 \times 3}{5 \times 3} = \frac{12}{15}$$

a) $\frac{1}{3}$

Answer:

$$\frac{1 \times 2}{3 \times 2} = \frac{2}{6}$$

$$= \frac{2}{6}, \frac{3}{9}, \frac{4}{12}$$

b) $\frac{2}{5}$

Answer:

$$= \frac{4}{10}, \frac{6}{15}, \frac{8}{20}$$

c) $\frac{1}{2}$

Answer:

$$= \frac{2}{4}, \frac{3}{6}, \frac{4}{8}$$

d) $\frac{25}{17}$

Answer:

$$= \frac{50}{34}, \frac{75}{51}, \frac{100}{68}$$

e) $\frac{3}{4}$

- **Addition of like fractions**

Steps to add like fractions

Step 1: Add the numerators of the fractions given and write over the common denominator.

$$\text{Sum} = \frac{\text{Sum of numerators}}{\text{Common denominators}}$$

Step 2: Write the answer in the simplest form. If answer is in improper fraction, convert it into mixed fraction.

Question: 1

$$\begin{aligned} & \frac{2}{5} + \frac{1}{5} \\ &= \frac{2+1}{5} = \frac{3}{5} \end{aligned}$$

Question: 2

$$\frac{2}{6} + \frac{1}{6}$$

$$= \frac{2+1}{6}$$

$$= \frac{3}{6}$$

$$= \frac{\cancel{3} \times 1}{\cancel{3} \times 2} \text{ (Simplest form)}$$

$$= \frac{1}{2}$$

Question: 3

$$\frac{6}{5} + \frac{7}{5}$$

$$= \frac{6+7}{5}$$

$$= \frac{13}{5}$$

$$= 2\frac{3}{5}$$

Question:

4) $\frac{1}{12} + \frac{5}{12}$

5) $\frac{7}{11} + \frac{2}{11}$

• Subtraction of Like Fractions

Steps to subtract like fractions

Step 1: Subtract the numerators of the fractions given and write over the common denominator.

$$\text{Difference} = \frac{\text{Difference of numerators}}{\text{Common denominators}}$$

Step 2: Write the answer in the simplest form. If answer is in improper fraction, convert it into mixed fraction.

Question: 1

$$\frac{2}{5} - \frac{1}{5}$$

$$= \frac{2-1}{5}$$

$$= \frac{1}{5}$$

Question: 2

$$\frac{3}{6} - \frac{1}{6}$$

$$= \frac{3-1}{6}$$

$$= \frac{2}{6}$$

$$= \frac{\cancel{2} \times 1}{\cancel{2} \times 3}$$

$$= \frac{1}{3}$$

Question

$$3) \frac{10}{8} - \frac{4}{8}$$

$$= \frac{10-4}{8}$$

$$= \frac{6}{8}$$

$$= \frac{\cancel{2} \times 3}{\cancel{2} \times 4}$$

$$= \frac{3}{4}$$

$$4) \frac{11}{2} - \frac{5}{2}$$

$$5) \frac{12}{7} - \frac{11}{7}$$

• **Word problem:**

- 1) There are 60 blocks and $\frac{3}{4}$ green in colour. How many blocks are not green?

Ans:-

Total blocks = 60

$$\frac{3}{4} \text{ of them are green} = 60 \times \frac{3}{4}$$

$$= 15 \times 3$$

$$= 45 \text{ blocks are green}$$

$$\text{Blocks are not green } (60 - 45) = 15$$

- 2) Anita counted 12 students in the choir. Three quarters of the students have brown hair. How many students in the choir have brown hair?

Ans:

Total students = 12

Three quarter of ($\frac{3}{4}$)

$$\text{Them have brown hair} = 12 \times \frac{3}{4}$$

$$= 3 \times 3$$

$$= 9 \text{ students have brown.}$$

❖ Activity

Make a fraction flowers with help of paper plates and colour papers

Ch-10

Play with patterns

❖ Key points to remember:

- Complete the patterns.
- Now you fill these stars.
- Using the same rule, complete these number towers.
- Code messages
- Activity.

- Complete the patterns.

Answer:

- Now you fill these stars.

Rule - Use numbers 1 – 9 and that the numbers on each line add up to 15 and no number should be repeat.

Solution

- Using the same rule, complete these number towers.

Answer:

- **Code messages**

1) Teenu wants to write to his friend 'Good Morning'.

7 15 15 4 13 15 18 14 9 14 7

Answer:

G = 7; O = 15; O = 15; D = 4

M = 13; O = 15; R = 18, N = 14, I = 9, N = 14; G = 7

Thus, 'Good Morning' is written as

- 2) Have a nice day-
- 3) I love India-
- 4) Good night-

- Activity:

CH-11

Tables and shares

❖ Key points to remember:

- Multiplication
- Division
- Word problems.

• **Multiplication sums:**

1) 12×8

$$\begin{array}{r} \textcircled{1} \\ 12 \\ \times 8 \\ \hline 96 \end{array}$$

2) 145×9

$$\begin{array}{r} 44 \\ 145 \\ \times 9 \\ \hline 1305 \end{array}$$

3) 25×16

$$\begin{array}{r} 3 \\ 25 \\ \times 16 \\ \hline 150 \\ + 250 \\ \hline 400 \end{array}$$

4) 78×69

$$\begin{array}{r} 4 \\ 78 \\ \times 69 \\ \hline 702 \\ + 4680 \\ \hline 5382 \end{array}$$

5) 127×34

$$\begin{array}{r} 1 \\ 127 \\ \times 34 \\ \hline 508 \\ + 3810 \\ \hline 4318 \end{array}$$

6) 473×85

$$\begin{array}{r} \overset{5}{3} \overset{2}{1} \\ \underline{ } \\ 473 \\ \times 85 \\ \hline 2365 \\ + 37840 \\ \hline 40205 \end{array}$$

• **Division**

The division is a method of distributing a group of things into equal parts. It is one of the four basic operations of arithmetic, which gives a fair result of sharing.

Division sums:

1) $28 \div 2$

$$\begin{array}{r} 14 \\ 2 \overline{) 28} \\ \underline{-2} \\ 08 \\ \underline{-8} \\ 00 \end{array}$$

2) $66 \div 6$

$$\begin{array}{r} 11 \\ 6 \overline{) 66} \\ \underline{-6} \\ 06 \\ \underline{-6} \\ 00 \end{array}$$

3) $96 \div 8$

$$\begin{array}{r} 12 \\ 8 \overline{) 96} \\ \underline{-8} \\ 16 \\ \underline{-16} \\ 00 \end{array}$$

4) $323 \div 19$

$$\begin{array}{r} 17 \\ 19 \overline{) 323} \\ \underline{-19} \\ 133 \\ \underline{-133} \\ 000 \end{array}$$

5) $600 \div 24$

$$\begin{array}{r} 25 \\ 24 \overline{) 600} \\ \underline{-48} \\ 120 \\ \underline{-120} \\ 000 \end{array}$$

6) $110 \div 10$

$$\begin{array}{r} 11 \\ 10 \overline{) 110} \\ \underline{-10} \\ 10 \\ \underline{-10} \\ 00 \end{array}$$

• **Word problem:**

- 1) There are 18 packets of Rakhis. Each packet has 6 Rakhis in it. How many total Rakhis are altogether?

Answer: -

No. of packets of rakhis = 18

No. of rakhis in one packet = 6

Total rakhis in all = 18×6

$$= 108$$

Total 108 rakhis are altogether in boxes.

- 2) There are 10 packets of sugar. Saurabh paid 11 rupees for one packet. How much money need to pay for 10 packets of Sugar?

Answer: -

No. of packets of sugar = 10

Cost of one packet = Rs 11

Total cost of 10 packets of sugar = 10×11

= Rs 110

Total 110 rupees need to pay for 10 packets of Sugar.

- 3) Leela has not gone to school for 21 days. For how many weeks was she away from school?

Answer:

Number of days in one week = 7

Leela has not gone to school for 21 days.

Number of weeks in 21 days = $21 \div 7$

$$\begin{array}{r} 3 \\ 7 \overline{) 21} \\ \underline{-21} \\ 00 \end{array}$$

Thus, Leela was away from school for 3 weeks.

- 4) Kajal made a necklace of 25 sea-shells. How many such necklaces can be made using 100 sea-shells?

Solution

No. of sea - shells in one necklace = 25

No. of sea – shells Kajal has = 100

Total no. of necklaces = $100 \div 25$

$$\begin{array}{r} 4 \\ 25 \overline{) 100} \\ \underline{-100} \\ 000 \end{array}$$

Kajal can make total 4 necklaces.

- 5) One carton can hold 85 soap bars. Dhruvi wants to pack 255 soap bars. How many cartons does she need for packing all of them?

Solution

No. of soap bars in one carton = 85

No. of soap bars Dhruvi has = 255

Total no. of cartons = $255 \div 85$

$$\begin{array}{r} 3 \\ 85 \overline{) 255} \\ - 255 \\ \hline 000 \end{array}$$

Dhruvi need 3 cartons to pack soap bars.

Ch-12

How heavy and How light?

❖ Key points to remember:

- Measuring Mass (weight)
- Conversion of kilogram into gram
- Which is a better unit to measure the weight of the following objects?
- Addition
- Subtraction
- Word Problems

- **Measuring Mass (weight)**

- Mass is a measure of how heavy something is.
- We use a balance scales or a weighing scales to measure mass (or weight)
- Mass is measured in grams (g) and kilograms (kg).
- We use grams to weigh lighter objects and kilograms to weigh heavier objects.

$$1 \text{ kg} = 1000\text{g}$$

Or

$$1000\text{g} = 1\text{kg}$$

- The standard unit of measurement of mass is Kilogram.

- **Convert Kilogram into gram.**

Note: In conversion of unit, when we go from higher unit to lower unit; such as from kg to g. we always multiply.

$$1 \text{ Kg} = 1000 \text{ g}$$

a) 4 kg.

$$= 4\text{kg} \times 1000\text{g}$$

$$= 4000\text{g}$$

b) 2kg = 2kg x 1000

$$= 2000\text{g}$$

c) 3kg = 3kg x 1000

$$= 3000\text{g}$$

d) 1kg 200g = 1kg x 1000 + 200g

$$= 1000\text{g} + 200\text{g}$$

$$= 1200\text{g}$$

e) 33kg 450g = 33kg x 1000 + 450g

$$= 33000\text{g} + 450\text{g}$$

$$= 33450\text{g}$$

f) 54kg 23g = 54kg x 1000 + 23g

$$= 54000\text{g} + 23\text{g}$$

$$= 54023\text{g}$$

• **Which is a better unit to measure the weight of the following objects?**

- 1) Weight of squirrel – **g**
- 2) Weight of cell phone – **g**
- 3) Weight of muskmelon – **kg**
- 4) Weight of a camel – **kg**
- 5) Weight of 1 carrot – **g**
- 6) Weight of washing machine – **kg**

• **Addition the following**

Step1: Add the gram column

Step2: Add the kg column

a) 75kg 582g and 13kg 410g

kg	g
75	582
+ 13	+ 410
88	992

b) 94kg 215g and 6kg 757g

kg	g
94	215
+ 06	+ 757
100	972

c) 55kg 540g + 18kg 479g

kg	g
55	540
+ 18	+ 479
74	019

d) 25kg 595g + 15kg 345g

• **Subtraction of following**

Step1: Subtract the gram column

Step2: Subtract the kg column

a) 13kg 410g from 75kg 582g

$$\begin{array}{r} \text{kg} \qquad \qquad \text{g} \\ 75 \qquad \qquad 582 \\ - 13 \qquad \qquad 410 \\ \hline 62 \qquad \qquad 172 \end{array}$$

b) 78kg 654g – 38kg 806g

$$\begin{array}{r} \text{kg} \qquad \qquad \text{g} \\ 617 \qquad \qquad 16414 \\ \cancel{78} \qquad \qquad \cancel{654} \\ - 38 \qquad \qquad 806 \\ \hline 39 \qquad \qquad 848 \end{array}$$

c) 22kg 500g – 1kg 753g

$$\begin{array}{r} \text{kg} \qquad \qquad \text{g} \\ 1 \qquad \qquad 14910 \\ 2\cancel{2} \qquad \qquad \cancel{500} \\ - 01 \qquad \qquad 753 \\ \hline 20 \qquad \qquad 747 \end{array}$$

d) 24kg 570g – 12kg 679g

• **Word Problems:**

1) Manu purchased 55kg 300g of a packet of rice and 41kg 200g of a packet of wheat flour. How much is the total weight of both the packets?

Solution:

Weight of rice = 5kg 300g

Weight of wheat flour = 4kg 200g

Total weight of both the packets = 5kg 300g + 4kg 200g

$$\begin{array}{r} \text{kg} \qquad \qquad \text{g} \\ 5 \qquad \qquad 300 \\ + 4 \qquad \qquad 200 \\ \hline 9 \qquad \qquad 500 \end{array}$$

2) Daksh weighs 39kg 900g. Mani's weight 35kg 600g. Who weighs more and by how much?

Solution:

Daksh's weight = 39kg 900g

Mani's weight = 35kg 600g

Daksh weight is more by = 39kg 900g – 35kg 600g

kg	g
39	900
- 35	600
<hr/>	
04	300

- 3) Rita bought 25 kg 630g of cherries. From that she used 22 kg 700g of cherries. How much cherries left with her?

Ch-13

Field and Fences

❖ Key points to remember:

- Area
Find the area of square
Find the area of rectangle
- Perimeter
Perimeter of a Square
Perimeter of a Rectangle
Perimeter of a Triangle
- Word Problem

- **Area**

Area is the region enclosed between the boundaries of a figure.

(2 Dimensional shapes).

Area is measured in "square" units.

$$10 \text{ mm} = 1\text{cm}$$

$$100 \text{ cm} = 1\text{m}$$

$$1000\text{m} = 1\text{km}$$

$$1 \text{ sq. cm} = 100 \text{ sq.mm}$$

$$1 \text{ sq. m} = 10000 \text{ sq.cm}$$

$$1 \text{ sq. km} = 1000000 \text{ sq. m}$$

- **Find the area of square :**

Area of square= Side x Side

(In case of square length and breadth are same)

1) Side of square = 10 m

Solve –

Area of square = Side x Side

$$= 10 \text{ m} \times 10 \text{ m}$$

$$= 100 \text{ sq. m}$$

2) Side = 15 cm

Solve -

Area of square = Side x Side

$$= 15 \text{ cm} \times 15 \text{ cm}$$

$$= 225 \text{ sq. cm}$$

3) Side = 16 m

Solve -

$$\begin{aligned}\text{Area of square} &= \text{Side} \times \text{Side} \\ &= 16 \text{ m} \times 16 \text{ m} \\ &= 256 \text{ sq. m}\end{aligned}$$

4) Side = 50 m

Solve -

$$\begin{aligned}\text{Area of square} &= \text{Side} \times \text{Side} \\ &= 50 \text{ m} \times 50 \text{ m} \\ &= 2500 \text{ sq. m}\end{aligned}$$

• **Find the area of rectangle:**

Area of Rectangle = Length x Breadth

1) Length = 12 cm, Breadth = 6 cm

Solve –

$$\begin{aligned}\text{Area of rectangle} &= \text{Length} \times \text{Breadth} (l \times b) \\ &= 12 \text{ cm} \times 6 \text{ cm} \\ &= 72 \text{ sq.cm}\end{aligned}$$

2) Length = 20 cm, Breadth = 11 cm

Solve –

$$\begin{aligned}\text{Area of rectangle} &= l \times b \\ &= 20 \text{ cm} \times 11 \text{ cm} \\ &= 220 \text{ sq.cm}\end{aligned}$$

3) Breadth = 13 m, Length = 18 m

Solve –

$$\begin{aligned}\text{Area of rectangle} &= l \times b \\ &= 13 \text{ m} \times 18 \text{ m} \\ &= 234 \text{ sq.m}\end{aligned}$$

4) Length = 22 m , breadth = 19 m

Solve –

$$\text{Area of rectangle} = l \times b$$

$$= 22 \text{ m} \times 19 \text{ m}$$
$$= 418 \text{ sq.m}$$

- **Perimeter**

The length of the boundary surrounded a shape is called perimeter.

- Find the perimeter of square:

Perimeter of a square = sum of all sides

OR

$$= 4 \times \text{Side}$$

- 1) Side of square 10 cm

10 cm

Method 1: Perimeter of square = sum of all sides

$$= 10 + 10 + 10 + 10$$

$$= 40 \text{ cm}$$

Method 2:

Perimeter of square = $4 \times$ side

$$= 4 \times 10 \text{ cm}$$

$$= 40 \text{ cm}$$

- 2) Side = 26 cm

Solution

Perimeter of a square = $4 \times$ side

$$= 4 \times 26 \text{ cm}$$

$$= 104 \text{ cm}$$

- 3) Side = 55 cm

Solution

Perimeter of a square = $4 \times$ side

$$= 4 \times 55 \text{ cm}$$

$$= \text{cm}$$

4) Side = 73 m

- **Perimeter of a Rectangle**

Perimeter of Rectangle = Sum of all side (L + L + B + B)

OR

$$= 2(L + B)$$

Example

1) Length = 10cm and Breadth = 5cm

Method First: Perimeter of rectangle = sum of all sides

$$\begin{aligned} &= 10 + 10 + 5 + 5 \\ &= 30 \text{ cm} \end{aligned}$$

Method second: Perimeter of rectangle = $2(L + B)$

$$\begin{aligned} &= 2(10 + 5) \\ &= 2 \times 15 \\ &= 30 \text{ cm} \end{aligned}$$

2) Length = 6 cm , breadth = 3 cm

Solution

$$\begin{aligned} \text{Perimeter of rectangle} &= 2(l + b) \\ &= 2(6\text{cm} + 3 \text{ cm}) \\ &= 2 \times 9 \text{ cm} \\ &= 18 \text{ cm} \end{aligned}$$

3) Length = 17m, breadth = 13 m

Solution

$$\begin{aligned} \text{Perimeter of rectangle} &= 2(l + b) \\ &= 2(17\text{m} + 13\text{m}) \end{aligned}$$

$$= 2 \times 30\text{m}$$
$$= 60\text{m}$$

4) Length = 15cm , breadth = 5cm

Solution

$$\text{Perimeter of rectangle} = 2(l + b)$$
$$= 2(15\text{cm} + 5\text{cm})$$
$$= 2 \times 20\text{cm}$$
$$= 40\text{cm}$$

5) Length = 22m ,breadth =14m

Solution

$$\text{Perimeter of rectangle} = 2(l + b)$$
$$= 2(22\text{m} + 14\text{m})$$
$$= 2 \times 36\text{m}$$
$$= 72\text{m}$$

• **Perimeter of a Triangle**

Scalene Triangle - A triangle whose all three sides are of different length is known as scalene triangle.

Isosceles Triangle - A triangle whose two sides are of equal length is known as isosceles triangle.

Equilateral Triangle - A triangle whose all sides are of equal length is known as equilateral triangle.

Q 1

Solution

$$\text{Perimeter of Scalene Triangle} = \text{Sum of three sides}$$
$$= AB + BC + CA$$
$$= 5 \text{ cm} + 10 \text{ cm} + 12 \text{ cm}$$
$$= 27 \text{ cm}$$

Q2

Solution

$$\begin{aligned}\text{Perimeter of Isosceles Triangle} &= \text{Sum of three sides} \\ &= AB + BC + CA \\ &= 10 \text{ cm} + 15 \text{ cm} + 10 \text{ cm} \\ &= 35 \text{ cm}\end{aligned}$$

Q3

Solution

$$\begin{aligned}\text{Perimeter of Equilateral Triangle} &= \text{Sum of three sides} \\ &= AB + BC + CA \\ &= 10 \text{ cm} + 10 \text{ cm} + 10 \text{ cm} \\ &= 30 \text{ cm.}\end{aligned}$$

OR

$$\begin{aligned}&= 3 \times \text{length (all 3 sides are equal)} \\ &= 3 \times 10 \text{ cm} \\ &= 30 \text{ cm.}\end{aligned}$$

Q4 AB = 5cm, BC = 6cm, CA = 8cm

Solution

$$\begin{aligned}\text{Perimeter of Scalene Triangle} &= \text{Sum of three sides} \\ &= AB + BC + CA \\ &= 5 \text{ cm} + 6 \text{ cm} + 8 \text{ cm} \\ &= 19 \text{ cm}\end{aligned}$$

Q5 $AB = 7 \text{ m}$, $BC = 7 \text{ m}$, $CA = 7 \text{ m}$

Solution

$$\begin{aligned}\text{Perimeter of Equilateral Triangle} &= 3 \times \text{length} \\ &= 3 \times 7 \text{ m} \\ &= 21 \text{ m}\end{aligned}$$

- Word Problem**

1. Find the length of rope required to fence a kitchen garden whose length is 4 m and breadth 2 m.

Solution

Here, Length = 4 m
Breadth = 2 m

(To fence a kitchen garden = we find perimeter)

$$\begin{aligned}\text{perimeter of a rectangle} &= 2(L + B) \\ &= 2(4 \text{ m} + 2 \text{ m}) \\ &= 2 \times 6 \text{ m} \\ &= 12 \text{ m}\end{aligned}$$

2. Find out length wire needed to put a boundary round a square park. One side of the park is 55 m?

Solution

Here, Side of a square park is = 55 m.

$$\begin{aligned}\text{Perimeter of a square} &= 4 \times \text{side} \\ &= 4 \times 55 \text{ m} \\ &= 220 \text{ m}\end{aligned}$$

The total 220 m wire is needed to put a boundary.

3. A blanket 4 m long and 2 m broad is to be stitched with red ribbon around the edge. How much ribbon is needed? Find out the total cost of ribbon, if cost of ribbon is Rs 3 per m?

Solution

Here, Length = 4m

Breadth = 2m

$$\begin{aligned}\text{Perimeter of rectangle blanket} &= 2(l + b) \\ &= 2(4\text{m} + 2\text{m}) \\ &= 2 \times 6\text{m} \\ &= 12\text{m}\end{aligned}$$

Cost of 1m ribbon is = Rs 3

$$\begin{aligned}\text{Total cost of 12m ribbon is} &= 12\text{m} \times 3 \\ &= \text{Rs } 36.\end{aligned}$$

4. Find the area of rectangular garden. The garden is 70 m long and 50 m wide.

Solution

Here, Length = 70m

Breadth = 50m

$$\begin{aligned}\text{Area of rectangular garden} &= l \times b \\ &= 70\text{m} \times 50\text{m} \\ &= 3500\text{sq.m}\end{aligned}$$

5. A square wall is to be painted. Its side is 200 cm. Find the area to be painted.

Solution

Here, side = 200cm

$$\begin{aligned}\text{Area of square wall} &= s \times s \\ &= 200\text{cm} \times 200\text{cm} \\ &= 40000\text{sq. cm}\end{aligned}$$

Smart Chart

❖ Key points to remember.

- Introduction - Data Handling
- Pictorial Representation of Data
- Pie Chart / Pie Graph
- Bar Graph/Column Chart
- Activity

- **Introduction - Data Handling**

Collection of information is called data. To keep this information we use different method is called data handling.

- **Pictorial Representation of Data**

When we represent numerical data through pictures or graph, it is termed as pictorial representation of data.

Example: The below graph shows how many oranges were sold in 3 weeks

Week	Oranges
Week 1	
Week 2	
Week 3	
Each  orange stands for 20 oranges	

Now, answer the following questions:

1) How many oranges were sold during the second week?

Solve. $20 \times 7 = 140$ oranges.

1) In which week the oranges sold minimum?

Solve. Week -3.

2) In which week the oranges sold maximum?

Solve. In Week 2.

- **Pie Chart / Pie Graph**

Representing numerical data by dividing a circle into slices or sectors is called pie chart or pie graph or circle graph. Each sector in pie chart represents a fraction of whole.

Example: In a circle below are the details of library books in the school library.

Now, answer the following questions:

1) How many books are there in the library in all?

Solve. $200+300+400+100 = 1000$ books

2) Name the subject on which least number of books is there in the library.

Solve. French, 100

3) Find the number of books on Math subject in the library.

Solve.400

4) Work out the difference between the number of French books and English books.

Solve. English Books – 300

French Books – 100

Difference = $300 - 100$

= 200 books.

• **Bar Graph/Column Chart**

Bar graph is the simplest form of representing data by displaying rectangular bars of different heights proportional to the value they represent.

Example: The graph shows different grades scored by students in Class - 4.

Now, answer the following questions:

1) How many students scored Grade B?

Solve. 25 students

2) Which Grade was least scored?

Solve .Grade D

3) How many student scored Grade A?

Solve. 10 students

4) How many students are there in class - 4?

Solve. $10 + 25 + 10 + 5 = 50$ students

- **The table given below shows the number of boys sold during the days of a week
From a toy shop**

Day	Number of toys
Sunday	5
Monday	7
Tuesday	4
Wednesday	9
Thursday	14
Friday	7
Saturday	20

1) What is the total number of toys sold in the week?

Solve – $5+7+4+9+14+7+20 = 66$ toys.

2) The day on which maximum number of toys were sold?

Solve – Thursday.

3) The day on which minimum number of toys were sold?

Solve – Tuesday.

4) The difference in numbers of toys sold on Saturday and Wednesday.

Solve – $20 - 9 = 11$ toys.

5) The days on which same number of toys were sold.

Solve – Monday and Friday.

Activity

- Complete the chart using symbols to represent the following information. One has been done for you.

Marks scored by a student of Class IV in different subjects out of 40 marks are given below.

- Science = 36 marks
- Hindi = 32 marks
- Maths = 36 marks
- English = 28 marks
- Drawing = 40 marks

(☺ = 4 marks)
