

<u>Class -VII</u>

Super Computer

Exercíse Corner

<u>Year- 2020-21</u>

CH-9 Computer Security

Focus of the chapter

- 1. Computer Virus
- 2. Symptoms of virus
- 3. Types of virus
- 4. Other harmful programs
- 5. Antivirus software

* Keywords

- ➢ Virus a program designed to perform undesired and malicious actions.
- Spam Unsolicited and unwanted email
- > Trojan Horse a harmful program that damages the computer once it runs.
- > Quarantining isolation of a file by antivirus software
- Checkpoint

Fill in the blanks.

- 1. The term <u>Malware</u> is formed by the combination of the words malicious and software.
- 2. A virus can <u>infect</u> the files in your computer.
- 3. Elk Cloner, Brain, Disk killer and stoned virus are types of boot sector viruses.
- 4. A file infector virus infects program and executable files.
- 5. <u>Spam</u> refers to unsolicited and unwanted email.
- 6. Elkern, Marburg, Satan Bug and Tuareg are examples of Polymorphic viruses

Page 2

A. Match the columns.

1	Trojan Horse	a	runs in the background of another file.
2	Worm	b	An Advertising Supported software
3	Backdoor virus	c	Although safe, but damages the system once it runs
4	Spyware	d	Can multiply itself over a network
5	Adware	e	Collects information about the Internet surfing habits of the user

Ans. $1 - \underline{\mathbf{c}} \quad 2 - \underline{\mathbf{d}} \quad 3 - \underline{\mathbf{a}} \quad 4 - \underline{\mathbf{e}} \quad 5 - \underline{\mathbf{b}}$

B. Fill in the blanks.

- 1. <u>Quarantining</u> a file is the first action performed by an antivirus software.
- 2. In <u>repairing</u> method, the antivirus removes the virus code and repairs the file.
- 3. <u>Repairing</u> a file is the best method to remove a virus code and restore the file to its original form.

- Exercise Corner
- A. Tick (\checkmark) the correct answers.
- 1. A virus that infects executable files is known as a?
- A. File infector virus
- 2. A virus that runs on the background of a file is known as
- A. Backdoor virus
- 3. You must regularly do this on your computer to remove viruses.
- A. Scan

- 1. A computer virus is a program that is designed to make our work easier. $\underline{\mathbf{F}}$
- 2. Boot sector viruses are loaded and run immediately at the time of booting the computer. \underline{T}
- 3. A macro virus changes its code every time it infects a new file. \mathbf{F}
- 4. Slammer Worm and Storm are examples of backdoor viruses. \mathbf{F}
- 5. Deleting a file is usually the first action that an antivirus software will take in case. \mathbf{F}
- C. Unscramble the following words.
- 1. SMOWR WORMS
- 2. VNARTUIIS ANTIVIRUS
- 3. CROMA MACRO
- 4. DAREWA ADWARE
- 5. JTORNA TROJAN

D. Identify the type of virus.

- 1. A virus that infects the boot records of a system is **Boot sector virus**
- 2. This type of virus is designed to collect information about the frequently visited websites. Spyware
- 3. This type of virus changes its code every time it infects a new file. <u>Polymorphic</u>
- 4. This type of virus is used to display advertisements in the form of banners and pop-ups. Adware

'age 4

5. Cascade, Sunday and Invader are examples of this type of virus. File Infector Virus
